

HIV CONTINUUM OF CARE CASCADES

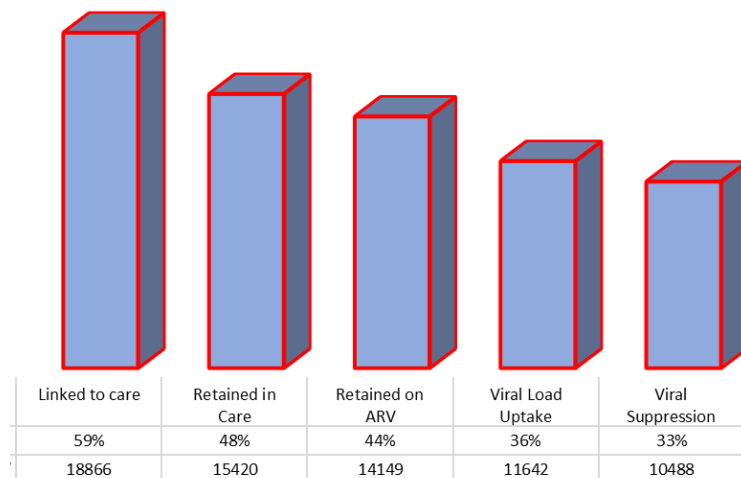

At the end of 2021 the country stood at 86-51-78 in the pursuit of the 90-90-90 target. The achievements for the 1st quarter of 2022 were 92-51-72 and for the 2nd quarter were 92-51-74. The improvement in the 1st 90 can be attributed to an amendment of the estimate of PLHIV in Jamaica from 32,000 to 30,000. Continued efforts in retention on ARV and promotion of adherence and viral suppression will be needed to improve the achievements in the 2nd and 3rd 90.

To begin the new year of 2022 there were 53 treatment sites and a network of 37 private physicians offering HIV treatment, care and support services

PERIOD: JAN – JUNE 2022

Six hundred and thirty six (636) PLHIV were newly linked to care and 591 newly initiated on ARV in the 1st and 2nd Quarter of 2022. However, in this same period 516 PLHIV became newly loss to follow-up (LTFU).

636
Linked to Care

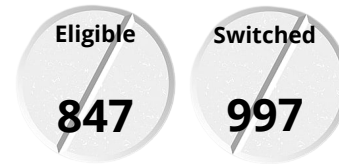

591
Initiated on ARV

516
Newly LTFU

128
Deaths

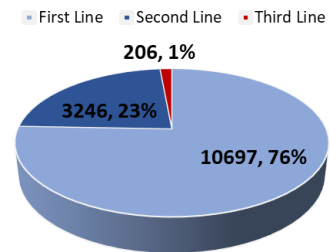

January 2022 marked the beginning of the transition to TLD as first line therapy for all eligible PLHIV on first line. The first quarter eligibility criteria were those on first line not containing DTG who were unsuppressed and the second quarter eligibility criteria were all adolescents on first line not containing DTG. There were 847 PLHIV eligible for the transition to TLD. A total of 997 persons were switched including those not yet eligible for transition.

TLD Transition

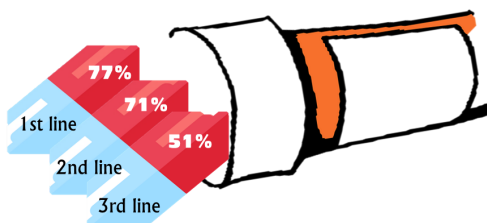

The majority (76%) of PLHIV are on 1st line therapy of which 77% are virally suppressed.
